RA YEMAGUCHI K., Subramalan A.R.;

The plastid ribosomal proteins. Identification of all the proteins in the 50 s submit of an organelle ribosome (chloroplast).";

RI J. Biol. Chem. 275:28466-28482(2000).

C. '- FUNCTION: THIS PROTEIN BINDS DIRECTLY TO 23S RIBOSOMAL RNA.

C. '- SUBCELLULAR LOCATION: CHLOROPLAST.

C. '- SUBCELLULAR LOCATION: CHLOROPLAST.

C. '- MISCELLANDOUS: ON THE 2D-CEL ITS MW IS: 16.5 KDA.

C. '- MISCELLANDOUS: ON THE 2D-CEL ITS MW IS: 16.5 KDA.

C. '- SIMILARITY: BELONGS TO THE LIOP FAMILY OF RIBOSOMAL PROTEINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for the diagnosis of a disease CC caused by, or associated with, an RNA molecule that has a frameshift CC mutation. The method is used to diagnose age-related diseases, sapecially CC cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's CC disease, Down's Syndrome, myotonic dystrophy, Huntington's disease, Cd disease, Down's Syndrome, myotonic dystrophy, Huntington's disease, CC multiple sclerosis, alcoholic liver disease, diabetes mellitus type II Cand many others listed) or susceptibility to these disorders. The method CC allows a definitive disagnosis of Alzheimer's disease in living patients, CC caused by mutations in RNA rather than DNA. The invention describes the CC caused by mutations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottations in RNA rather than DNA. The invention describes the CC caused by mottation in RNA rather than DNA. The invention describes the CC caused by mottation in RNA rather than DNA. The invention describes the CC caused by mottation in RNA rather than DNA. The invention describes the CC caused by mottation in RNA rather than DNA. The invention describes the CC caused by mottation in RNA rather than DNA. The invention describes the CC caused by mottation in RNA rather than DNA. The invention describes may be considered to the control of Alzheimer's disease may be controlled to the control of Alzheimer's disease may be controlled to the control of Alzheimer's disease may be cont
                                                                                                                                                                                                                                                                                                                 skin; intestine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzhahmer's disease, and also for treatment and prevention with specific ribozymes or wild-type

The present peptide is a specific example of new interleukin-6 antagonists of the general formula X-A-B-D-V, where X is 1-10 amino acids or an amino group protecting group; Y is 1-5 amino acids, a carboxyl group protecting group or an amide; A is preferably Arg having an opt. protected guanidino group but can be any amino acid; D is Arg having an opt. protected guanidino group and B is preferably a Leu residue but can be any amino acid, including non-natural amino acids, opt. having a protected guanidino. The peptides are useful for treating autoimmune diseases (e.g. systemic lupus erythematosus or chronic rheumatism), renal, skin and intestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        phytase protein. The phytase protein may be used in the composition of the invention. The DNA encoding the phytase protein may be introduced into a Trichoderma host which then expresses it and the protein is collected from the culture medium. By using Trichoderma a host for Aspergillus phytate degrading enzymes such as this, a totally different enzyme composition compared to that secreted from Aspergillus rosults. The enzyme composition can be used for removal of phytic acid or inositol hexaphosphoric acid from raw material, particularly plant material. The composition is used in feed compositions for animals. By using Trichoderma as a Source of a composition contains a phytical contains a physical contains a physical contains as a source of a composition contains and acid from the composition of the contains and the composition of the contains and the composition as a source of a composition contains and the composition of the contains and the composition of the contains and the composition of the contains and the contains and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       skin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      composition containing phytate degrading enzymes some difficult downstream processing problems, eg. filtration, that occur with similar Aspergillus compositions are avoided and yields are improved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic

                                                                                                                                                                                                                  Ouery Match
                                                                                                                                                                                                                                                                         The immunomodulatory peptide is a specific example of a peptide cpd. (or an acid or base salt) constructed by combination and/or overlapping of the amino acid sequences AlBIXB2A2, A3B3XA484, B$A$XA6B6, B7A7XBBA8, A9B9, A10A11, B10A12, and B11B12 (x-A1a, G1y, B1-B12 each-Asp, Glu, Tyr, Phe or Val. The synthetic peptide may be used for immunomodulation of various immunodeficiencies and immunosuppressed conditions, T-cell subset and lymphocyte deviations, enhancement of a vaccines efficacy, as well as for immunotherapy, including infections, local or systemic complications, wounds and burns. See also AAR24583-R24701.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New synthetic immunomodulatory peptide(s) - for treating immunodeficiencies, immunosuppression and T-cell subset deviations and immuno-therapy of infections, inflammation,
          Interleukin-6 antagonist 4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present peptide is a specific example of new interleukin-6 antagonists of the general formula Y-A-B-D-Y, where X is 1-10 amino acids or an amino group protecting group; Y is 1-5 amino acids, a carboxyl group protecting group or an amide; A is preferably Arg having an opt. protected guanidino group but can be any amino acid; D is Arg having an opt. protected guanidino group and B is preferably a Leu residue but can be any amino acid, including non-natural amino acids, opt. having a protected side-chain. The peptides are useful for treating autoimmune diseases (e.g. systemic lupus erythematosus or chronic rheumatism), renal, skin and intestinal

They corresspond to the consensus sequence AAW83855. The PSA substrates are useful in assays which measure PSA activity. Such assays may provide a clinical evaluation of patients suffering from, or at risk for, prostate cancer. Elevated levels of PSA in serum are widely used as a marker of prostate cancer, and the substrates can be used e.g. to measure the amount of active PSA in patient serum to diagnose, or determine the malignant potential of, a patient's prostate disease. They are especially useful to diagnose metastatic prostate cancer. The substrates can also be used in assays to identify PSA inhibitors, which can be administered to treat or

                                                                                                                                                                                                                                                AAW83856-94 represent peptides cleaved by 50 microgram/ml human prost specific antigen (PSA). They corresspond to the consensus sequence AAW83855 The PSA substrates are useful in assays which measure PSA activity. Such assays may provide a clinical evaluation of patients suffering from, or at risk for, prostate cancer. Elevated levels of PSA in serum are widely used as a marker of prostate cancer, and the substrates can be used e.g. to measure the amount of active PSA in patient serum to diagnose, or determine the malignant potential of, a patient's prostate disease. The substrates can also be used in assays to identify PSA inhibitors, which can be administered to treat or

They corresspond to the consensus sequence AAW83855. The PSA substrates are useful in assays which measure PSA activity. Such assays may provide a clinical evaluation of patients suffering from, or at risk for, prostate cancer. Elevated levels of PSA in serum are widely used as a marker of prostate cancer, and the substrates can be used e.g. to measure the amount of active PSA in patient serum to diagnose, or determine the malignant potential of, a patient's prostate cancer. The substrates can also be used in assays to identify PSA inhibitors, which can be administered to treat or research prostate cancer, which can be administered to treat or

ce esterified forms of up to 60 amino acids, where the peptide type compound comprises the formula: A-B, where A, B = (B aa76-77L) (aa79-84) or C (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; C (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; C (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; C (aa86 = I or N; aa81-a a hydrophobic or small amino acid; aa82 = R or G; C (aa86 = G or R; and aa represents amino acid. The sequence in the Drackets may optionally be absent or truncated at any peptide type bond C (abst in the brackets. The compounds comprise amino acid sequences related C (abst in the brackets. The compounds comprise amino acid sequences related C (abst or in vitro. They can also be used in combination with antigenic C (abst or in vitro. They can also be used in combination with antigenic C (abst or in vitro. They can also be used in combination with antigenic C (abst or proteins of interest to activate CTLS. They can also inhibit C (abst or proteins of relis in response to anti-CD3. The peptide can be C (used for preventing rejection of transplants or for traating autoimmune C (diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transplantation; rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a specifically claimed peptide which forms part of the immunomodulating dimer peptides of the invention. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal and the compound or control of the invention of the immunomodulating control or including the N-terminal acylated and/or C-terminal acylated and including the N-terminal acylated and/or C-terminal acylated and including the N-terminal acylated a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New immunomodulating dimor peptide(s) - based alpha-1 domain, used for preventing rejection treating autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 1998-086530/08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (STRD ) UNIV LELAND STANFORD JUNIOR.

It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases. Peptides using the D-form amino acids are more effective immunomodulators than their diastereomers or enantiomers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.

These are useful in the treatment of diseases associated with abnormal II-6 expression, including multiple myeloma, plasmacytoma, haematological diseases such as plasma cell dysorastas, leukaemia and lymphoma, mesangial proliferative glomerulonephritis, polycional B cell activation conditions, altergies, rheumatoid arthritis, diabetes, multiple sclerosis, septic shock, infections, post-menopausal osteoporosis, chronic immune deficiency, autoimmune diseases and inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides which inhibit the binding of interleukin (IL)-6 ligand with the IL-6 receptor, and the nucleic acids that encode them, useful for treating e.g. inflammation and autoimmune diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 3; Page 46; 98pp; English.

Primary structure and biological activity of bradykinin potentiating
peptides from Bothrops insularis snake venom.";
J. Protein Chem. 9:221-227(1990).
1- FUNCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE
ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF
BRADYKININ BY INHIBITING THE KINASES THAT INACTIVATE IT.
IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.
